

## METROLINK

### Material selection system

The fully automatic material selection and distribution system.

METROLINK assures that in your production process every desired connection of a material to a processing machine can be made quickly and reliably; no contamination guaranteed. Fixed pipe connections throughout the whole production process until the next material change ensures maximum security.

The standard version supplies up to 15 processing machines automatically with up to 16 material options.

METROLINK stands out for user friendly operation, it can run fully automatically with a METROnet PLC microprocessor control or simply manually.

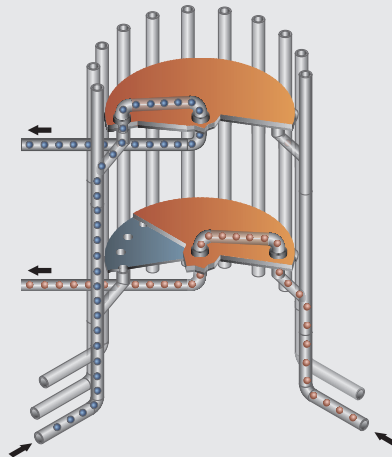

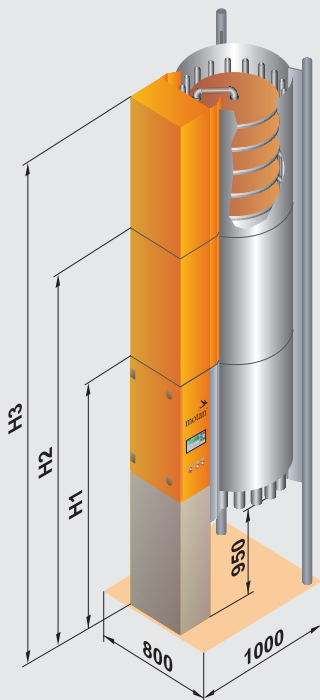

The ideal building block for your materials handling system – METROLINK.

# METROLINK

## Your benefits:

- Space saving – due to compact vertical design
- Wear resistant – through eliminating the need for flexible hoses
- Long life – due to rigid pipe construction
- Safe – due to secure pipe connections throughout the whole conveying cycle
- Low maintenance – because of the small number of switching operations
- Contamination free – due to automatic purging before every conveying cycle
- Quality assured – since material selection will always be correct
- Optimised capacity – there are no switching operations during normal conveying
- User friendly – easy to operate
- Easily expandable – due to modular construction

### Technical data

	METROLINK 45	METROLINK 60
Number of material lines	4 - 16	4 - 12
Number of machines	3 - 15	3 - 15
Ø Material lines (mm)	45	60
Power supply 1/N/PE (V/Hz)	230/50	230/50
Air pressure (bar)	4 - 10	4 - 10
Dimensions (mm)		
H1	3 - 5 material outlets	2000
H2	6 - 10 material outlets	2960
H3	11 - 15 material outlets	3920
